Who We Are

About **Us**

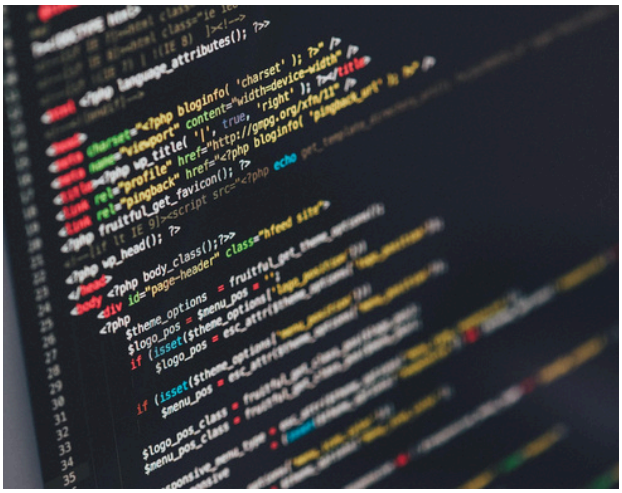

FusionEdge Technologies Ltd is a Kenyan-owned and Kenyan-run technology company based in Nairobi. Our mantra is Solutions that Connect: practical technology that keeps our clients powered, connected and secure.

We work across four areas: solar and electrical systems, security and access, IT and fibre infrastructure, and software. Our clients include corporates, institutions, ISPs, contractors, schools and homeowners.

Every project is delivered by a trained team of engineers, from site survey and design through installation, testing and handover. We are a young, hands-on company, and we build each solution around how the client actually operates, not around a fixed package.

After handover, we stay available for maintenance, support and IT consulting, so clients always have someone to call.

Our **Vision**

"Technology that keeps Kenya powered, connected and secure."

Our **Mission**

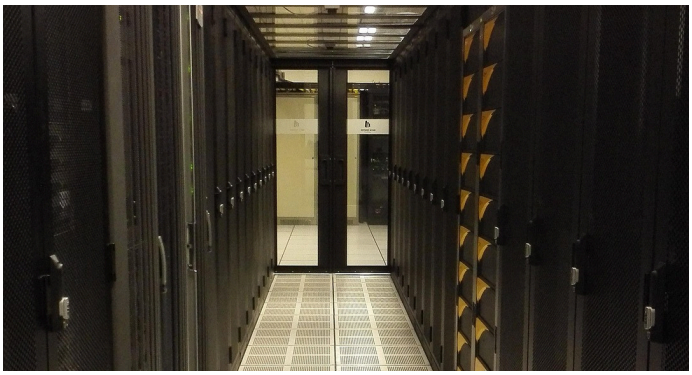

To deliver practical, dependable power, security, network and software solutions to businesses, institutions and homes, designed around what each client actually needs.

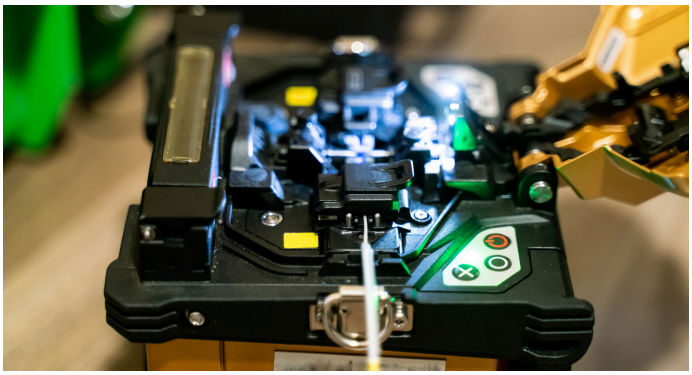

Core **Values**

- **Reliability:** we build systems to last and stand behind them after handover.
- **Integrity**: honest quotations and honest advice.
- **Quality Workmanship**: neat, tested and documented installations.
- **Safety**: safe practices on every site, especially live ones.
- **Accountability**: we own our work and respond when something needs fixing.

Objectives

Deliver every project to specification and on schedule, with full documentation at handover.

Build long-term maintenance relationships with clients after installation.

Keep growing the team's skills in solar, networking, security and software.

Expand our client base across corporate, institutional and ISP sectors in Kenya.

Our Services

What We **Offer**

Solar & Electrical Systems

We design, supply and install solar systems, from energy audits and quotations to panels, inverters and battery banks, with maintenance to keep them performing. Our electrical team handles domestic and commercial installations for offices, banks, shopping centres, schools, churches and multi-storey buildings, along with backup power (generators and UPS), lightning protection and fire alarms.

Security & Access Systems

We design and install CCTV, access control and staff attendance systems for corporates, institutions and businesses, with biometric and card-based options and remote camera monitoring, integrated with your existing IT infrastructure. We also fit barrier gates and automated entry for office parks, institutions and commercial premises, as well as residential estates, gated compounds and short-let properties such as Airbnbs.

Our Services

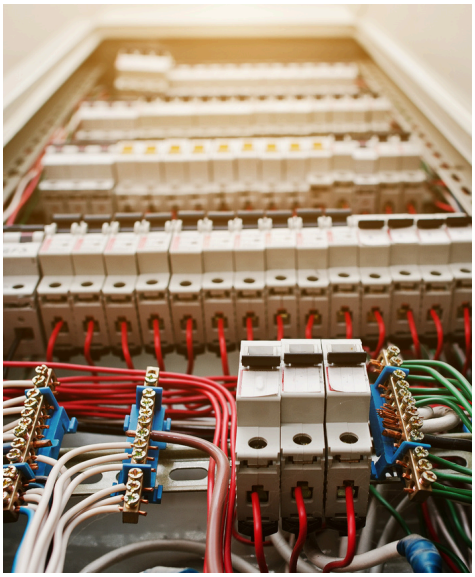

What We **Offer**

IT & Fibre Infrastructure

We build and maintain the physical and network backbone of a workplace: server rooms, structured cabling, racks, switches, routers, firewalls and power continuity, all tested and documented at handover. Our fibre services cover installation, splicing and repair, and we supply fibre tools and equipment to ISPs, technicians and network installers. We work on live, occupied sites with minimal disruption.

Software & Digital Solutions

We develop, deploy, upgrade and maintain mobile, web and on-premises software for schools, businesses and SMEs, built around each client's operations. We also migrate data, applications and servers to new platforms, including cloud, with minimal downtime, and provide technology upgrades and IT consulting.
We also develop custom IoT solutions to match specific customer needs.

WHY FUSIONEDGE

Why Choose **FusionEdge**

We combine engineering expertise, multidisciplinary technical capabilities and hands-on project delivery to provide reliable solutions from initial assessment through installation, commissioning and ongoing support.

1. Engineering-Led Delivery

Our core team of trained engineers stays involved from site assessment and technical design through installation, testing and commissioning. We own the systems we deliver, so there is one accountable team at every stage.

2. Specialists Matched to the Work

For each project we bring in qualified, experienced personnel across solar, electrical, fibre, networking and IT infrastructure. This lets us take on projects of varying complexity without compromising on technical standards.

3. Tested, Commissioned, Documented

Every installation is tested and commissioned before handover. Clients receive documentation of what was installed, how it is configured and the test results, giving them a clear record of the system and its status.

4. Practical Solutions, Reliable Support

We size solutions to actual site requirements, with transparent assessments and quotations instead of over-specification. We install on live, occupied premises with minimal disruption, and after handover we provide a support line available at all times, plus maintenance and IT consulting.

Key Projects

Our Work **Speaks** for **Itself**

Solar Energy Systems

We have designed and installed [15+] solar systems across Nairobi and its surrounding towns, Amboseli and Mombasa, from 2kWp homes to a 10.5kWp three-phase pump system and commercial installations such as CKZ Group in Mombasa. Our work covers hybrid and off-grid systems, upgrades to existing installations, and the electrical wiring that goes with them. Every system is designed, installed, configured, tested and commissioned by our team.

Electrical Installation Works

We carried out electrical installations and maintenance for residential buildings across Nairobi and for business premises being set up from the early stages. The work covered wiring, conduit and cable installation, distribution boards, lighting and fixtures, and the maintenance to keep them running safely. Projects included the electrical installation for container units and residential units at Pipeline and Ruiru Bypass, covering conduit installation, cable pulling and fitting of electrical fixtures.

Infrastructure & Technology

Node NBO, Gigiri
Scope: Installed server racks, cable trays and PDUs, and carried out the 3-phase wiring for the server room.
Our role: Subcontractor.

Security & Access Systems
Steadfast Academy: Biometric Attendance & Access System
We installed a biometric attendance and access system for Steadfast Academy, covering the complete biometric setup and attendance data retrieval.
Javan Informatics: CCTV Security System
We installed security cameras for Javan Informatics and configured the DVR and the existing network to support the system.

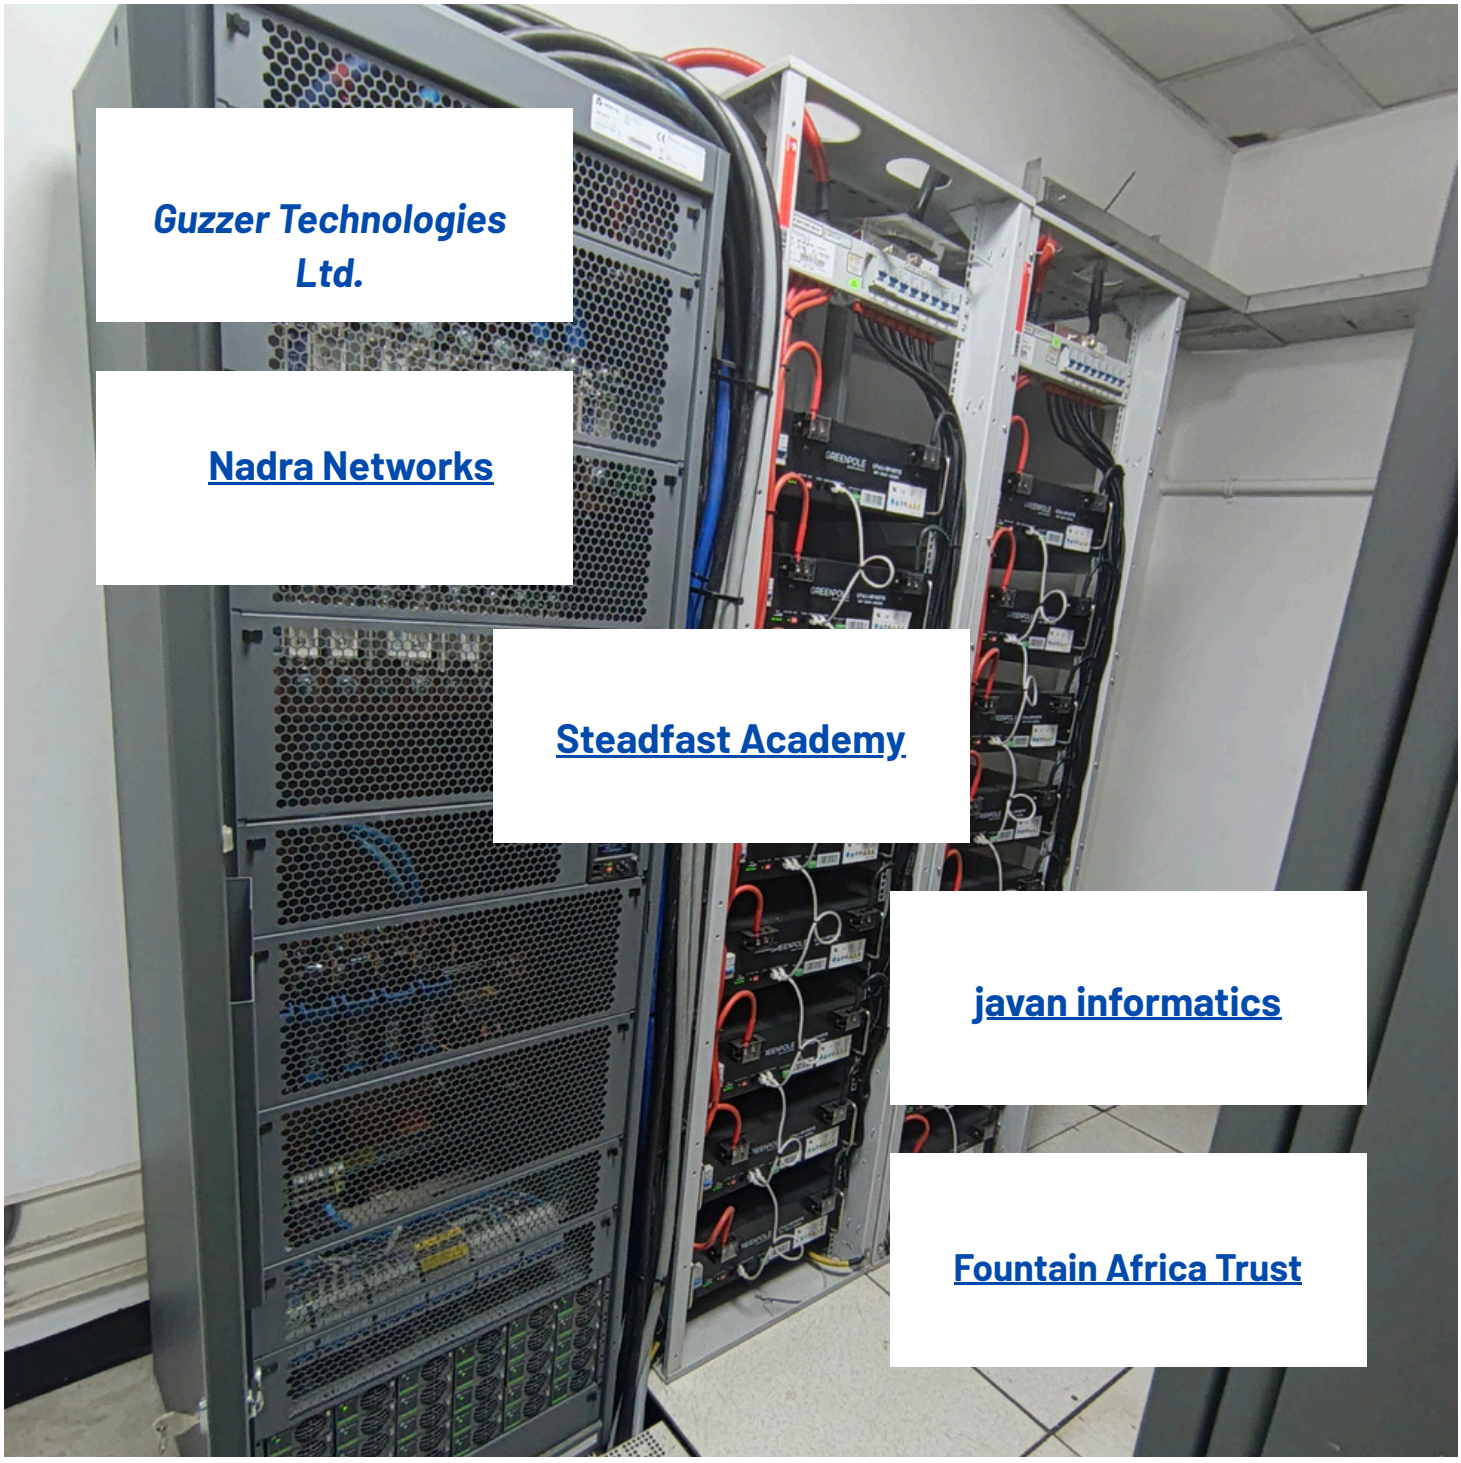

Software & Digital Solutions
Fountain Africa and custom IoT solutions handled the end-to-end setup of the fountainafrica.org website, and further web development projects are currently under way. We also delivered custom IoT solutions for different business setups and client projects.
